

How to Make a Simple Personal Trip Wire Perimeter Alarm for primitive camping situations.

Purchase a 130 DB personal security alarm as shown below. They typically cost from \$5 and up.

Fasten a wire or fishing line to the pull pin. Tape or tie the speaker box to a non movable object. Run the wire or fishing line around ones perimeter so that if something runs into it will pull the plug and the alarm will go off. If needed: To make it more sensitive the pin can be partly pulled out and the tension on the wire adjusted to max without pulling the pin.
